Douglas College
CSIS 1280-005 Multimedia Web Development
Fall 2025
Assignment 1

Due at: September 19, 11:59pm on Blackboard

Gentle reminder: This is an individual assignment. While you are allowed to ask the instructor or other students for help and to look up things up on the Internet etc., the file you hand in must be the product of your work only. You should be creating the required files in Visual Studio Code from scratch yourself. Any copying of (partial or complete) solutions from other students or other sources (AI Tools etc.) violates the principles of academic integrity as outlined in the Douglas College Academic Integrity Policy (https://www.douglascollege.ca/sites/default/files/docs/Academic%20Integrity%20Policy.pdf) and will be reported to the Dean's office.

Requirements: Create a website about yourself using valid html. The website should consist of a main page and least two different pages that might e.g. describe information like your CV, hobbies, your favorite food, your favorite city etc. Note that you are welcome to include real information about yourself. If you are uncomfortable with sharing accurate information, you are equally welcome to make things up. The three pages need to be linked together appropriately. Validate your code before submitting it.

Include at least the following elements:
- Proper html file structure with doctype tags, html, head, body, title tags
- Appropriate meta data, in particular, charset and search keywords for search engines
- Comments describing the creation date, author and purpose of each file
- Structural elements, in particular, header, nav, article, footer
- Two levels of headings (h1, h2), paragraphs, blockquote
- Some text level elements, such as em, strong, cite
- At least…
  - One ordered list
  - One unordered list
  - One description list
  - One nested list (can be ordered or unordered)
  - Two special characters (entity characters)
  - Three images with appropriate alt tags, at least one of which should be a link
  - One mailto: reference to your Douglas College email address

You are *not* required to use css for this assignment.

Submission:
- You submission must be a single zip file named <FirstName>.<LastName>-A1.zip (e.g. Michael.Wufka-A1.zip) that contains all the files belonging to your website
- No email submissions will be accepted. Late submissions will automatically receive the grade zero.
- You can submit your answer on Blackboard multiple times – the last submission before the due date will be marked (make sure to submit, not just upload, your file!).
- After submitting, download the file you submitted to double check that you submitted the correct file and that it works on a Windows computer like the lab machines. If you submit a file that does not work (e.g. that cannot be extracted), you will receive zero marks.
